Art Unit: 3744

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 10, 11, and 19-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Saperstein et al in view of Redfern et al. Saperstein et al discloses the claimed invention, including a docking station 68 or 69 remotely located from the primary heat exchanger 62 through a secondary liquid circuit 66-70. However, Saperstein et al does not disclose the recited docking station for receiving a container for objects to be cooled. Redfern et al teaches a refrigeration system including a remotely located container 10 for objects to be cooled. It would be obvious to provide Saperstein et al with a container as part of the docking station 68 or 69, in view of Redfern et al, for the purpose of providing additional cooling for objects to be cooled such as food items.

3. Claims 6, 7, 12-18, and 22-35 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected species, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on October 22, 2004.

4. Applicant's arguments filed February 28, 2005 have been fully considered but they are not persuasive. Applicant states that he cannot find any teaching or suggestion in either Saperstein et al or Redfern et al of a dual circuit refrigeration system using a refrigerant to cooling liquid heat exchanger to transfer heat between the refrigerant and

Art Unit: 3744

the cooling liquid. In Saperstein et al the refrigerant in primary circuit 38, 44, 62 exchanges heat between the refrigerant and the cooling liquid in secondary circuit 66-70. Additionally, in Redfern et al, the refrigerant in the primary circuit which includes evaporator 50 exchanges heat with the liquid 48 in the cooler. This liquid may be considered the secondary circuit.

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
